News roundup

Munki business

■ Pantone and X-Rite have launched the ColorMunki product portfolio, which includes Photo, Design and Create constituents with the Photo product targeting photographers. The products include a combination of software and hardware for the purpose of colour creation, control and communication. To find out more, check out the website at www.colormunki.com.

Aperture update

■ Apple has announced the Aperture version 2.1 release. The upgrade introduces an open plug-in architecture that aims to make it easier for photographers to use specialised third-party applications, as well as including Apple's own plug-in dodge and burn. Existing Aperture 2.0 customers can take advantage of the free upgrade from www.apple.com/uk/aperture.

RedEyeBot

■ Software producer FirmTools has unveiled its latest app to hit the shelves, RedEyeBot. Quite self-explanatory, the product automatically removes red-eye from images automatically. The kit runs through the shots in batches, processing hundreds of files in minutes as well as providing full back-up and restore capabilities. A free trial is obtainable from the company's website (<http://redeyebot.firmtools.com/>).
